Maintenance Responsibilities

Vehicle safety and operational reliability are dependent on maintenance work. The FUSO maintenance system if followed and carried out at the prescribed intervals and under normal conditions will enable your vehicles to exceed the lifespan and durability designed into the product.

You as the owner need to ensure the prescribed maintenance is done on time and within distance parameters at a Daimler Trucks & Buses Southern Africa authorized workshop or authorized dealer to ensure continuity of the warranty, including but not limited to:

- **Front Wheel Alignment and Wheel Balance:** Front wheel alignment is affected by operating conditions such as corrugated roads, potholes or driving against the kerb, overloading etc. Wheel alignment service contributes to longer tyre life and better vehicle handling.
- **Tyre Care:** Incorrect inflation pressures, rapid acceleration, quick stops, high vehicle speeds and loads, all affect tyre life and can cause uneven wear.
- **Rear Axle/Transmission Oil Change:** Where the vehicle is operated in muddy areas, the beach, streams, rivulets/flooded areas, etc. drive train components should be serviced as soon as possible, as damage caused by water entry or corrosion is not covered under warranty.

CUSTOMER OBLIGATIONS

- **Brake and Clutch Adjustments:** Brake and clutch linings are subject to wear from usage depending upon driving conditions and driving habits of each individual driver. Periodic check of brake lining condition and clutch linkage adjustment is recommended for safe and trouble free operation.
- **Positive Crankcase Ventilation:** Valve Crankcase vapors and other impurities can cause malfunctions of the crankcase ventilation valve. Periodic inspection or replacement may be necessary for smooth engine operation.
- **Glow Plugs (where applicable):** Glow plugs (if fitted) are subject to wear. They should be inspected periodically and replaced if necessary for ease of starting and engine life.
- **Diesel Injectors:** Mechanical Diesel Injectors (if fitted) are subject to wear, leakage and drop in release pressure. Servicing at the required intervals in accordance with the service schedule is necessary for optimum performance and economy.
- **Engine Oil Change and Filters:** Changing engine oil, air cleaner and oil filter elements at recommended intervals are your best investment in prolonged engine life, efficiency and performance. Should a vehicle not be in operation for longer than six (6) months, the oil must be changed before the vehicle is used.
- **Belt Adjustments:** To ensure proper performance of belt-driven engine components, all belts must be checked and adjusted periodically.
- **Valves and Carbon Deposits:** A degree of carbon build-up is normal in the combustion chambers of any engine, depending upon fuel quality and operating conditions. For best results follow the recommendations of your selling dealer on types and grades of fuels and oils which should be used regularly.
- **Lubrication:** Heat, cold, dusty conditions or unusually wet weather all contribute to the need for lubrication at regular intervals. Throttle, injector pump, parking and brake linkage as well as body parts such as door and cab latches and hinges, weather seals, etc. should receive attention at every oil change.
- **Cooling Hoses:** All hoses must be checked and replaced if necessary at intervals specified in the Service Schedule.

Note: Drive belts must be replaced at intervals specified in the Service Schedule.
